1927 New York (State). Legislature	2003-12-01 Tamas D. Gedeon Consider the problem of a robot (algorithm, learning mechanism) moving along the real line attempting to locate a particular point ? . To assist the mechanism, we assume that it can communicate with an Environment ("Oracle") which guides it with information regarding the direction in which it should go. If the Environment is deterministic the problem is the "Deterministic Point - cation Problem" which has been studied rather thoroughly [1]. In its pioneering version [1] the problem was presented in the setting that the Environment could charge the robot a cost which was proportional to the distance it was from the point sought for. The question of having multiple communicating robots locate a point on the line has also been studied [1, 2]. In the stochastic version of this problem, we consider the scenario when the learning mechanism attempts to locate a point in an interval with stochastic (i. e. , possibly erroneous) instead of deterministic responses from the environment. Thus when it should really be moving to the "right" it may be advised to move to the "left" and vice versa. Apart from the problem being of importance in its own right, the stochastic pointlocationproblemalsohas potentialapplications insolvingoptimization problems. Inmanyoptimizationsolutions-forexampleinimageprocessing,p- tern recognition and neural computing [5, 9, 11, 12, 14, 16, 19], the algorithm worksits wayfromits currentsolutionto the optimal solutionbasedoninformation that it currentlyhas. A crucialquestionis oneof determining the parameter whichtheoptimizationalgorithmshoulduse.	1909 American Association of Local Freight Agents' Associations
1917		2005-10-03 Michal Pechoucek The aim of the CEEMAS conference series is to provide a biennial forum for the presentation of multi-agent research and development results. With its particular geographicalorientation towards Central and Eastern Europe, CEEMAS has become an internationally recognised event with participants from all over the world. After the successful CEEMAS conferences in St. Petersburg (1999), Cracow (2001) and Prague (2003), the 2005 CEEMAS conference takes place in Budapest. The programme committee of the conference series consists of established researchers from the region and renowned international colleagues, sharing the prominent rank of CEEMAS among the leading events in multi-agent systems. In the very competitive field of agent oriented conferences and workshops nowadays(suchasAAMAS,WI/IAT,EUMAS,CIA,MATES)thespecialprofile of CEEMAS is that it is trying to bridge the gap between applied research achievements and theoretical research activities. Our ambition is to provide a forum for presenting theoretical research with an evident application potential, implemented application prototypes and their properties, as well as industrial case studies of successful (but also unsuccessful) agent technology deployments. This is why the CEEMAS proceedings volume provides a collection of research and application papers. The technical research paper section of the proceedings (see pages 11-499) contains pure research papers as well as research results in application settings while the application papers section (see pages 500-530) contains papers focused on application aspects. The goal is to demonstrate the real life value and commercial reality of multi-agent systems as well as to foster communication between academia and industry in this field.

2019-03-15 Eli Berman The most common image of world politics involves states negotiating, cooperating, or sometimes fighting with one another; billiard balls in motion on a global pool table. Yet working through local proxies or agents, through what Eli Berman and David A. Lake call a strategy of "indirect control," has always been a central tool of foreign policy. Understanding how countries motivate local allies to act in sometimes costly ways, and when and how that strategy succeeds, is essential to effective foreign policy in today's world. In this splendid collection, Berman and Lake apply a variant of principal-agent theory in which the alignment of interests or objectives between a powerful state and a local proxy is central. Through analysis of nine detailed cases, Proxy Wars finds that: when principals use rewards and punishments tailored to the agent's domestic politics, proxies typically comply with their wishes; when the threat to the principal or the costs to the agent increase, the principal responds with higher-powered incentives and the proxy responds with greater effort; if interests diverge too much, the principal must either take direct action or admit that indirect control is unworkable. Covering events from Denmark under the Nazis to the Korean War to contemporary Afghanistan, and much in between, the chapters in Proxy Wars engage many disciplines and will suit classes taught in political science, economics, international relations, security studies, and much more.	1897	1898
2007-03 Timothy Brook Studies of collaboration have changed how the history of World War II in Europe is written, but for China and Japan this aspect of wartime conduct has remained largely unacknowledged. In a bold new work, Timothy Brook breaks the silence surrounding the sensitive topic of wartime collaboration between the Chinese and their Japanese occupiers. Japan's attack on Shanghai in August 1937 led to the occupation of the Yangtze Delta. In spite of the legendary violence of the assault, Chinese elites throughout the delta came forward to work with the conquerors. Using archives on both sides of the conflict, Brook reconstructs the process of collaboration from Shanghai to Nanking. Collaboration proved to be politically unstable and morally awkward for both sides, provoking tensions that undercut the authority of the occupation state and undermined Japan's long-term prospects for occupying China. This groundbreaking study mirrors the more familiar stories of European collaboration with the Nazis, showing how the Chinese were deeply troubled by their unavoidable cooperation with the occupiers. The comparison provides a point of entry into the difficult but	1917	1903
	2006-08-11 Walter S. Sanford The Real Estate Investing Guide Just for Agents If you're a real estate agent, your knowledge of the industry can give you a big leg-up when it comes to investing. Insider Investing for Real Estate Agents shows you how to maximize your returns using your special, insider knowledge of listings, local markets, and trends, as well as your connections with local buyers and sellers. In this one-of-a-kind guide, Walter Sanford shows you not only how your experience as an agent can aid your investing, but also how investing can make you a better agent--leading to more customers, listings, and sales. Filled with all the tools you need to combine and improve your skills as an investor and agent, this practical, hands-on resource includes more than 100 handy forms, checklists, and worksheets--all designed to help you make wise decisions, spot bargains, and manage properties with a minimum of risk. Inside, you'll find unbeatable advice on: * Insider tactics for obtaining investment financing * Using your natural advantages as an agent to find great	2018-10-23 Chastin Miles Are you are an aspiring, a practicing or a struggling Real Estate agent? When starting out as an agent, there are many challenges you come across. You may have great ideas blowing up in your mind but before long, you realize that nothing has worked. If you are at this stage, don't

worry, you are not alone. The main reason why over 80 percent of the beginner agents quit is that they do not know how to differentiate the REALITY from the REAL ESTATE. I feel like I wasted my first 2 years as an agent. I did not make any progress in my career. I made unnecessary mistakes and my personal and professional life was full of struggles. I can't remember how many times I felt like quitting. But then I also learned a few secrets that I want to pass out to all aspiring and beginner agents. My Name is Chastin J. Miles and I'm an award-winning and accomplished real estate agent. I started off in Dallas, TX and had to struggle like most agents. Through the many years of my career, I have managed to turn things around and now I sit among the best. I have won over 10 awards in this short period including being named Best Real Estate Agent by D Magazine and the 2018 Top Social Media Expert Texas by Top Agent Magazine. My work has been featured in over 8 magazines and even TV shows. I could go on and on about my success but this is not about me. This is about you and what you need to break through. The Real Before The Estate is a book I wrote specifically to help those trying to scale up the ladder in the industry. The Real Before The Estate takes you away from the theories you learn in school and the ideas you have in your mind by introducing you to the real world of real estate. Think of this book as the demo mode of Real Estate world. This book gives you practical knowledge and step by step processes on how to get started and actually succeed in the real estate world. It took me over six years of making mistakes, interacting with industry leaders, and making tough decisions to acquire this knowledge. If I had the knowledge I have now when I started I would be very far in my career. But I don't regret anything; through years of experience, I have managed to reach the peak of my career. Now I use my knowledge to mentor upcoming agents. This is everything you must know before you get into the prosperous yet tumultuous community of Real Estate Agents.

2021-01-12 Meredith Fogle Harvest real success through real estate farming Are you a real estate agent ready to transform your business? Experts agree that building and operating a real estate farm is the most direct path to success. Like a traditional farm, a real estate farm is a limited geographic area in which you plant seeds via marketing and leads, tend your crops by strengthening client relationships, and harvest the fruits of your labor through repeat business and referrals, resulting in market dominance. In this essential, step-by-step guide, real estate expert Meredith Fogle shows you how to select a farm area, create farm dominance, and even how to sell an established farm business. You'll have access to practical exercises, worksheets, and charts, plus secrets of "Famous Farmers"—top-producing real estate bloggers, TV contributors, and market leaders—who share the keys to their success. Farming, for Real Estate Agents is also filled with fundamental principles and systems that can be applied to almost any sales business to immediately increase leads and income. Whether you're starting a career and seeking quick success or you're an established agent looking to achieve top-producer status and transform your business, this innovative book is the only one you'll need to reap immeasurable rewards from your real estate farm.

2010 "Wolf" Elliott Tom "Wolf" Elliott A down-to-earth, detailed guide to every aspect of establishing and running a small, local talent booking agency, written by someone who has done so successfully for over 30 years. You don't need any particular background or a fancy college degree or even much money, just a desire to own and operate one of the most fun businesses you could ever imagine. It's all here how to find the talent, how to build up a clientele, how to promote yourself, the contracts you'll need, and a fascinating insight to where you can go from here, including becoming a modeling agent, a TV producer, a writer, a record album producer, and much

more.

2019-02-07 Wendell Minnick A complete 100-page list of Taiwan defense agents/contractors working for foreign defense companies. Though this document dates from 2005, the relationships and contracts between local agents and foreign defense companies have not changed significantly. Many of the large companies are listed: BAE, Bell, Boeing, Elbit, Eurocopter, Euromissile, General Dynamics, Honeywell, Israel Military Industries, L-3, Lockheed Martin, Moog, Northrop Grumman, Pratt & Whitney, Rafael, Raytheon, Rockwell Collins, Sikorsky, Singapore Technologies and Thomson-CSF.

2011-02-14 Luis M. Camarinha-Matos This book constitutes the refereed proceedings of the Second IFIP WG 5.5/SOCOLNET Doctoral Conference on Computing, Electrical and Industrial Systems, DoCEIS 2011, held in Costa de Caparica, Portugal, in February 2011. The 67 revised full papers were carefully selected from numerous submissions. They cover a wide spectrum of topics ranging from collaborative enterprise networks to microelectronics. The papers are organized in topical sections on collaborative networks, service-oriented systems, computational intelligence, robotic systems, Petri nets, sensorial and perceptive systems, sensorial systems and decision, signal processing, fault-tolerant systems, control systems, energy systems, electrical machines, and electronics.
