2009-02-26 Stephenie Meyer Melanie Stryder refuses to fade away. The earth has been invaded by a species that takes over the minds of their human hosts while leaving their bodies intact, and most of humanity has succumbed. Wanderer, the invading 'soul' who has been given Melanie's body, knew about the challenges of living inside a human: the overwhelming emotions, the too-vivid memories. But there was one difficulty Wanderer didn't expect: the former tenant of her body refusing to relinquish possession of her mind. Melanie fills Wanderer's thoughts with visions of the man Melanie loves - Jared, a human who still lives in hiding. Unable to separate herself from her body's desires, Wanderer yearns for a man she's never met. As outside forces make Wanderer and Melanie unwilling allies, they set off to search for the man they both love.

2016-02 F. T. Lukens Ren grew up listening to his mother spin magical stories about the Star Hosts, a mythical people possessed by the power of the stars. When Ren is forced into slavery by the despotic ruler of

his home planet fief, he is stunned to discover firsthand that his mother's folklore surrounding the Star Hosts is true; he is one of them. Armed with this knowledge and the aid of a fellow prisoner-an inscrutable member of the revered Phoenix Corps regiment named Asher-Ren learns to control his newly emerging technopathic abilities. While navigating the growing attraction between them, together they must plan their escape in time to alert the Phoenix Corps of the Baron's intent to conquer the peaceful Drift Alliance before it's too late.

2012-12-06 F. Vögtle The scientific and practical interest in coronands (crown ethers), cryptands, podands as complexing agents for cations as well as for anions and neutral low molecular species is undeniable 1,2). The chemistry of crown compounds is steadily increasing. About 250 original papers dealing with crown chemistry appeared only in 1980. New molecules with crown ether properties are constantly synthesized and new applications discovered. Owing to lack of space, only a small number of the original publications is mentioned here. Thus, in the literature compilation only some, but relevant works are selected for each chapter. Whenever possible, reference is made to reviews or review-like articles alone by means of which original works can be consulted. The reviews given under ref. 1) are considered to be the most relevant. The formulae presented in the figures should be

understood as representative structures outlining a specific field. 2 Classification of Oligo-/Multidentate Neutral Ligands and of their Complexes Today, a distinction is made between the classical ring oligoethers (crown ethers) and monocyclic coronands, oligocyclic spherical cryptands and the acyclic podands with respect to topological aspects 3). This classification and the topology are illustrated in Fig. 1, each figure representing the minimum number of donor atoms and chain segments characteristic of each class of compounds. Multidentate mono cyclic ligands with any type of donor atoms are called coronands ("crown compounds"), while the term crown ether should be reserved for cyclic oligoethers exclusively containing oxygen as donor atom.

2010 Yi-Ching Ong Toxoplasma gondii is an obligate, intracellular parasite of the Apicomplexan phylum that is able to infect nearly all warm-blooded vertebrates. This capability for survival in a variety of host niches is reflected in the diversification of Toxoplasma strains. Strains differ dramatically in their interaction with hosts, and a fruitful approach towards understanding the molecular underpinnings of disease has been to identify and characterize drivers of strain-specific differences in host response. Chapter 1 provides a general introduction to Toxoplasma gondii and its ability to modulate host immunity, with special attention given to what is known about the mechanisms behind strain-specific phenotypes and the role of one particular player, ROP16. Chapter 2 describes experiments demonstrating that Toxoplasma secretes a polymorphic tyrosine kinase, ROP16, that can directly phosphorylate host STAT6. These experiments made use of a targeted disruption of the ROP16 locus in Type I parasites to identify ROP16-dependent signaling pathways, and used biochemical approaches to dissect the mechanism by which ROP16 is able to induce rapid STAT6 activation. Chapter 3 describes work demonstrating that ROP16 activation of STAT6 directs murine macrophage polarization towards an alternatively activated (M2) phenotype. In Chapter 4, the avian host response to Toxoplasma is examined to determine whether strain-specific differences in host response might be inverted in non-mammalian hosts. We show that strain-specific transcriptional host response, as well as transcriptional host response modulated by ROP16, appears very similar in chickens as in mice and humans. This suggests that variance between mammalian and avian host species in general may not be the source of selective pressure for the success of these common strains, or of ROP16's variability. Chapter 5 concludes with a discussion of future directions for further characterization of ROP16's role in modulating host response. We show that ROP16 interacts with host chromatin and suggest that investigation of ROP16's function in the host nucleus might yield further molecular insights as to how Toxoplasma is able to co-opt host cells and influence the course of infection.

2007-06-24 Howard Goldfine During the past twenty years Listeria

monocytogenes has emerged as one of the most intensely studied bacterial pathogens. New windows are constantly being opened into the complexity of host cell biology and the interplay of the signals connecting the various cells and organs involved in the host response. This volume includes research from studies at the molecular level on the pathogenesis of *Listeria monocytogenes* and the response of the host to its infections.

2010-04-26 Stephenie Meyer *Melanie Stryder* refuses to fade away. The earth has been invaded by a species that take over the minds of their human hosts while leaving their bodies intact, and most of humanity has succumbed. 2017-08-07 Elizabeth Schleber Lowry Provides a rhetorical analysis of female spirit mediums' autobiographies in the historical and social contexts of Victorian-era America. *Invisible Hosts* explores how the central tenets of Spiritualism influenced ways in which women conceived of their bodies and their civic responsibilities, arguing that Spiritualist ideologies helped to lay the foundation for the social and political advances made by women in the late nineteenth and early twentieth centuries. As public figures, female spirit mediums of the Victorian era were often accused of unfeminine (and therefore transgressive) behavior. A rhetorical analysis of nineteenth-century spirit mediums' autobiographies reveals how these women convinced readers of their authenticity both as respectable women and as psychics. The author argues that these women's autobiographies reflect an attempt to emulate feminine virtues even as their interpretation and performance of these virtues helped to transform prevailing gender stereotypes. She demonstrates that the social performance central to the production of women's autobiography is uniquely complicated by Spiritualist ideology. Such complications reveal new information about how women represented themselves, gained agency, and renegotiated nineteenth-century gender roles.

2016 Dale H. Clayton For many of us, the mere mention of lice forces an immediate hand to the head, and recollection of childhood experience with nits, special shampoos, etc. But for a certain breed of

biologist, lice make for fascinating scientific fodder, especially so if you are a scientist studying coevolution. Lice and their various hosts--humans, birds, etc. --provide a stunning example of the ecology of species coevolution. This system of complex symbiotic relations reveals some of the ecological principles of coevolutionary relations, one of the most exciting areas of research in evolutionary biology of recent. This work provides an introduction to coevolutionary concepts and approaches, ranging from microevolutionary (ecological) time to macroevolutionary time. The authors then use the system of parasitic lice and their hosts to illustrate some of these different concepts and approaches. They draw examples from a variety of other coevolving systems for comparative purposes, and emphasize the integration of cophylogenetic, comparative, and experimental data in testing coevolutionary hypotheses. Because lice are permanent parasites that spend their entire lifecycle on the body of the host, their close ecological association makes them ideally suited for this kind of synthetic overview of coevolution."

2020-02-20 Flora Annie Steel "The Hosts of the Lord" is a 1900 historical novel by Flora Annie Steel. Flora Annie Steel (1847 – 1929) was an English writer who notably lived in British India for 22 years and is best remembered for her books set or related to the sub-continent. This insightful novel offers the reader a unique glimpse into life in colonial India, weaving an intricate story to the backdrop of British imperialism in an exotic land. An entertaining and insightful novel, "The Potter's Thumb" is highly recommended for those with an interest in India's history and will not disappoint those who have read and enjoyed other works by this author. Other works by this author include: "Tales of the Punjab" (1894), "The Flower of Forgiveness" (1894), and "The Potter's Thumb" (1894). It is with this in mind that we are republishing this volume now in an affordable, modern, high-quality edition complete with the original text and artwork.

2018-10-02 Gabriela Domicelj "THESE SUPERHOSTS UNDERSTAND HOMESHARING BETTER THAN ANYONE ELSE. I STRONGLY RECOMMEND THIS BOOK FOR HOMESHARE HOSTS" Chip Conley, Strategic Adviser for Hospitality and Leadership, Airbnb Learn how to build a profitable, professional and sustainable homeshare business. Home Stay, also known as Homeshare, is a global phenomenon whereby ordinary people share their homes with strangers. On Airbnb alone there are now three million hosts around the world, one million more than a year ago. This book offers frank, practical and hands-on

advice for those who are considering or already offering their home, or investment property, as short-term accommodation. Written by self-taught hosts who are dedicated to providing the best possible guest experience, this book provides real-life insights into the day-to-day experience of running a homeshare, and the lessons the authors have learned along the way. You'll find easy-to-follow instructions and advice on: - Getting started - how to market your property by defining its unique characteristics, choosing the most appropriate online sales platform, setting rates, how to manage sales and presenting your property to attract guests - Managing the guest experience - how to ensure your guests have a wonderful experience from the moment of arrival to departure, managing transitions between guests effectively and consistently, and how to manage guest reviews - The business of homeshare - financial management, reporting and how to drive your business further.

2005-02-03 A. F. G. Dixon Literature on the population dynamics of insect herbivores tends to favour a top-down regulation of abundance, owing much to the action of natural enemies. Originally published in 2005, this volume challenges this paradigm and argues that tree-dwelling species of aphids, through competition for resources, regulate their own abundance. The biology of tree-dwelling aphids is examined, particularly their adaptation to the seasonal development of their host plants. When host-plant quality is favourable, aphids, by telescoping generations, can achieve prodigious rates of increase which their natural enemies are unable to match. Using analyses of long-term population censuses and results of experiments, this book introduces students and research workers to insect herbivore-host dynamics using the interaction between aphids and trees as a model.

2016-07-05 Robin Cook *Coma*—reimagined for the twenty-first century from the undisputed king of medical thrillers. Lynn Peirce, a fourth-year medical student at South Carolina's Mason-Dixon University, thinks she has her life figured out. But when her otherwise healthy boyfriend, Carl, enters the hospital for routine surgery, her neatly ordered life is thrown into total chaos. Carl fails to return to consciousness after the procedure, and an MRI confirms brain death. Devastated by Carl's condition, Lynn searches for answers. Convinced there's more to the story than what the authorities are willing to reveal, Lynn uses all her resources at Mason-Dixon—including her

initially reluctant lab partner, Michael Pender—to hunt down evidence of medical error or malpractice. What she uncovers, however, is far more disturbing. Hospitals associated with Middleton Healthcare, including the Mason-Dixon Medical Center, have unnervingly high rates of unexplained anesthetic complications and patients contracting serious and terminal illness in the wake of routine hospital admissions. When Lynn and Michael begin to receive death threats, they know they're into something bigger than either of them anticipated. They soon enter a desperate race against time for answers before shadowy forces behind Middleton Healthcare and their partner, Sidereal

Pharmaceuticals, can put a stop to their efforts once and for all.

2012-06-13 Valene L. Smith Tourism—one of the world's largest industries—has long been appreciated for its economic benefits, but in this volume tourism receives a unique systematic scrutiny as a medium for cultural exchange. Modern developments in technology and industry, together with masterful advertising, have created

temporarily leisured people with the desire and the means to travel. They often in turn effect profound cultural change in the places they visit, and the contributors to this work all attend to the impact these "guests" have on their "hosts." In contrast to the dramatic economic transformations, the social repercussions of tourism are subtle and often recognized only by the indigenous peoples themselves and by the anthropologists who have studied them before and after the introduction of tourism. The case studies in *Hosts and Guests* examine the five types of tourism—historical, cultural, ethnic, environmental, and recreational—and their impact on diverse societies over a broad geographical range
